Professional Summary

Data Science Intern candidate pursuing B.Tech in Information Technology at VIT University (CGPA: 9.3/10). Hands-on experience in machine learning, deep learning, NLP, and statistical analysis using Python, SQL, TensorFlow, and Scikit-learn. Built and deployed end-to-end AI/ML solutions including fraud detection, sales analytics, and NLP-based content moderation. Familiar with model validation, performance evaluation, and collaborating with cross-functional teams to deliver scalable, business-driven analytics solutions.

Education

VIT University

Bachelor of Technology in Information Technology (CGPA: 9.3/10.0)

Vellore, Tamil Nadu

Expected: May 2027

Sunbeam English School

Higher Secondary Certificate (CBSE) - 93.4%

Varanasi, Uttar Pradesh

2022

KCP Siddhartha Adarsh Residential Public School

Secondary School Certificate (CBSE) - 92%

Vijayawada, Andhra Pradesh

2020

Technical Projects

Auto Insurance Fraud Detection System

[Link](#)

| *Python, Pandas, NumPy, Scikit-learn, Streamlit*

- Conducted data preprocessing and exploratory data analysis (EDA) using Pandas and NumPy, including handling missing values and encoding categorical variables to prepare data for model training
- Performed feature importance analysis to identify key fraud indicators such as claim amount, incident severity, and vehicle age, improving model interpretability and decision-making
- Achieved 93.05% ROC-AUC score by training and evaluating multiple ML models (Logistic Regression, Decision Tree, KNN, XGBoost, Extra Trees) and selecting the best-performing algorithm
- Developed and deployed a real-time fraud detection web application using Streamlit, integrating the Extra Trees Classifier with over 93% accuracy

Superstore Sales Analysis with SQL

Link

| *MySQL, Tableau*

- Validated and explored the Superstore dataset using MySQL, performing checks on data types, null values, and categorical consistency for clean and reliable analysis
- Extracted key business insights through SQL queries including regional sales performance, customer segmentation, discount impact, and product category trends

Online Speech Moderation System

Link

| *Python, TensorFlow, Flask, BERT, Scikit-learn*

- Implemented a text classification system to detect hate speech and offensive content, performing NLP preprocessing including tokenization, normalization, and sequence padding for deep learning models
- Trained and compared three deep learning architectures (SimpleRNN, LSTM, and BERT) for hate speech detection, analyzing performance trade-offs in accuracy, training time, and model complexity
- Fine-tuned a BERT-based transformer model achieving 78% accuracy, with evaluation using classification reports and confusion matrices to assess precision, recall, and F1-scores
- Deployed a Flask web application integrating the trained model to provide real-time hate speech predictions on user-submitted text

Technical Skills

- Programming: Python, C++, SQL
- Machine Learning & AI: Supervised & Unsupervised Learning, NLP, Deep Learning, BERT, Model Validation
- Statistics: Descriptive Statistics, Probability, Feature Analysis, Model Evaluation Metrics
- Frameworks & Libraries: TensorFlow, Scikit-learn, Pandas, NumPy
- Databases & Tools: MySQL, Git/GitHub, Streamlit, Flask, Databricks
- Core Concepts: Data Structures & Algorithms, OOP, DBMS, Machine Learning Lifecycle

Certifications & Additional Information

- Machine Learning course by SmartBridge and Google for Developers
- Link
- Oracle Certified AI Foundations Associate (OCI 2025)
- Link
- Oracle Certified AI Professional Associate (OCI 2025)
